

444-KUS Keyboard 444-K25 Keypad

With the new freely programmable IHSE (Series 444) keyboard, a keyboard, mouse and keypad can be connected as a single HID device to a KVM system through a single USB port without the need for an additional HID extension. The remaining USB port on the extender CON Unit allows simultaneous connection of another USB HID device. The mechanical and ergonomic keyboard is designed for high demands and heavy duty with up to 50 million keystrokes.

444 Series - Programmable Keyboard

Comfortable operation:

The high-quality workmanship with anodized aluminum housing, adjustable tilt angle, abrasion-resistant key lettering, precise attachment points and excellent haptics with optional damping element provides a very pleasant writing experience.

Practical extension:

The keyboard can be expanded by up to two matching 25-keypads [Part No 444-K25]. for freely programmable function keys or macros (2 Layers = 50 Strings). Thanks to the simple cordless connection, the workplace remains neat and free of unnecessary cabling. The keypads can also be connected to the KVM system apart from the IHSE keyboard.

Individual printing of keypad keys:

Support of customer-specific printing and assignment of the keypad keys [Part No.444-K25P].

For safety-critical applications:

The IHSE keyboard facilitates black-red separation of security zones, as operated in military and secure government facilities.

Features
